

1. Authentication and User Profile

- Add dashboard to manage student and teachers as admin
- Add dashboard students and teachers to manage their profile
- Include forgot password option in login
- Include confirm password field in registration
- Add error messages for incorrect fields in registration
- Add dashboard students and teachers to manage their profile

2. Booking request system

- When booking show available teachers or slots etc
- Filters by modules , subject etc.

3. Content Management

-

4. Quiz and Assessment Management

- Show the student insight
- Add calculation part all sum of quiz

5. Reviews and Support Component

- add a filter system to the support tickets to filter openened/in progress and closed.
- And the review should be able to select a specific teacher after the system is integrated.
- Teachers should have a page to see all the reviews they have gotten from all students,
- Admins should be able to message both teachers and students.
- To find a specific teacher/ student there must be a search filter when creating a ticket / review.

6. Financial Management

- When a booking is confirmed in the booking component, a payment record is automatically created in the financial management component, including details such as subject, grade, teacher name, and amount and other details. The student completes the payment through the gateway, and the transaction is stored with a status that changes from pending to completed. Invoice generated.
